Foreword by	v
Robert Almgren	v
Bertrand Patillet	vi
Philippe Guillot	vii
Albert J. Menkveld	ix
Preface by	xi
Charles-Albert Lehalle	xii
Sophie Laruelle	xv
About the Editors	xvii
About the Contributors	xix
Introduction	1
1. Monitoring the Fragmentation at Any Scale	33
1.1 Fluctuations of Market Shares: A First Look at Liquidity	33
1.1.1 The market share: A not so obvious liquidity metric	33
1.1.2 Phase 1: First attempts of fragmentation	39
1.1.3 Phase 2: Convergence towards a European offer	50

1.1.4	Phase 3: Apparition of broker crossing networks and dark pools	54
1.2	SOR (Smart Order Routing), A Structural Component of European Price Formation Process	62
1.2.1	How to route orders in a fragmented market?	62
1.2.2	Fragmentation is a consequence of primary markets' variance	71
1.3	Still Looking for the Optimal Tick Size	74
1.3.1	Why does tick size matter?	74
1.3.2	How tick size affects market quality	77
1.3.3	How can tick size be used by trading venue to earn market share?	91
1.3.4	How does tick size change the profitability of the various participants in the market?	97
1.3.5	The value of a quote	100
1.4	Can We See in the Dark?	102
1.4.1	Mechanism of dark liquidity pools	102
1.4.2	In-depth analysis of dark liquidity	105
2.	Understanding the Stakes and the Roots of Fragmentation	117
2.1	From Intraday Market Share to Volume Curves: Some Stationarity Issues	117
2.1.1	Inventory-driven investors need fixing auctions	119
2.1.2	Timing is money: Investors' optimal trading rate	129
2.1.3	Fragmentation and the evolution of intraday volume patterns	139
2.2	The Four Main Liquidity Variables: Traded Volumes, Bid-Ask Spread, Volatility and Quoted Quantities	143

- 2.3 Does More Liquidity Guarantee a Better Market Share? A Little Story About the European Bid–Ask Spread 148
 - 2.3.1 The bid–ask spread and volatility move accordingly 150
 - 2.3.2 Bid–ask spread and market share are deeply linked 153
 - 2.3.3 Exchanges need to show volatility-resistance 156
- 2.4 The Agenda of High Frequency Traders: How Do They Extend their Universe? 158
 - 2.4.1 Metrics for the balance in liquidity among indexes 159
 - 2.4.2 A history of coverage 161
 - 2.4.3 High-frequency traders do not impact all investors equally 163
- 2.5 The Link Between Fragmentation and Systemic Risk 169
 - 2.5.1 The Spanish experiment 170
 - 2.5.2 The Flash Crash (May 6, 2010) in NY: How far are we from systemic risk? . . . 177
 - 2.5.3 From Systemic Risk To Circuit Breakers 187
- 2.6 Beyond Equity Markets 189

3. Optimal Organizations for Optimal Trading 193

- 3.1 Organizing a Trading Structure to Answer a Fragmented Landscape 193
 - 3.1.1 Main inputs of trading tools 194
 - 3.1.2 Components of trading algorithms . . . 197
 - 3.1.3 Main outputs of an automated trading system 198
- 3.2 Market Impact Measurements: Understanding the Price Formation Process from the Viewpoint of One Investor 203
 - 3.2.1 Market impact over the trading period . 204

3.2.2	Market impact on a longer horizon: Price anticipation and permanent market impact	209
3.3	The Price Formation Process and Orderbooks Dynamics	215
3.3.1	Information reaching orderbooks	217
3.3.2	Understanding via conditioning	219
3.3.3	Conclusion on orderbook dynamics	226
3.4	Optimal Trading Methods	227
3.4.1	Algorithmic trading: Adapting trading style to investors' needs	227
3.4.2	Liquidity-seeking algorithms are no longer nice to have	233
3.4.3	Conclusion on optimal trading	244
Appendix A: Quantitative Appendix		247
A.1	From Entropy to FEI (Fragmentation Efficiency Index)	247
A.2	Information Seeking and Price Discovery	250
A.3	A Simple Model Explaining the Natural Fragmentation of Market Microstructure	253
A.3.1	A toy model of SOR dynamics	255
A.3.2	A toy model of the impact of SOR activity on the market shares	256
A.3.3	A coupled model of SOR-market shares dynamics	257
A.3.4	Simulations	258
A.3.5	Qualitative analysis	259
A.4	Kyle's Model For Market Making	260
A.5	A Toy Model of the Flash Crash	261
A.5.1	A market depth-oriented model	262
A.5.2	Impact of the Flash Crash on our model	263
A.6	Harris Model: Underlying Continuous Spread Discretized by Tick	266

A.7	Optimal Trade Scheduling	273
A.7.1	The trading model	275
A.7.2	Towards a mean–variance optimal trade scheduling	276
A.7.3	A Simple Stochastic Control Framework	281
A.8	Estimation of Proportion and its Confidence Intervals	284
A.8.1	Application to the estimation of the market share of venues on an asset	286
A.8.2	Aggregation or application to the market share on an index	286
A.8.3	Comparison of the estimators	287
A.9	Gini Coefficient and Kolmogorov–Smirnov Test	288
A.9.1	Gini coefficient	288
A.9.2	Kolmogorov–Smirnov test	289
A.9.3	Practical implementation	291
A.10	Simple Linear Regression Model	292
A.10.1	Model presentation	293
A.10.2	Application to relation between spread and volatility	295
A.11	Time Series and Seasonalities	298
A.11.1	Introduction to time series	298
A.11.2	Example of volume model	302
A.12	Clusters of Liquidity	304
A.12.1	Introduction to point processes	305
A.12.2	One-dimensional Hawkes processes	308
A.12.3	The propagator model	311
A.13	Signature Plot and Epps Effect	316
A.13.1	Volatility and signature plot	316
A.13.2	Correlation and Epps effect	318

A.14	Averaging Effect	318
A.14.1	Mean vs. path	319
A.14.2	Regression of average quantities vs. mean of the regressions	319
Appendix B: Glossary		323
Bibliography		331
Index		337
