PART I MODELS AND TOOLS

1	Markets and expectations	3
1.1	Introduction	3
1.2	A simple set-up	4
1.3	The role of production lags	5
1.4	The maximin rule and expected utility maximization	6
1.5	Summary and further reading	9
2	Expected utility maximization	10
2.1	Introduction	10
2.2	Utilities and probabilities	10
2.3	Markets and equilibrium	11
2.4	Expected utility according to von Neumann–Morgenstern	12
2.5	Variance of income as measure of risk	16
2.6	Measures of risk aversion	18
2.7	Portfolio selection as exemplary application of expected utility maximization	19
2.8	Summary and further reading	20
3	Effects of heterogeneous expectations	21
3.1	Introduction	21
3.2	The model	22
3.3	Summary and further reading	26
Appendix 3.1	Modelling heterogeneity of expectations with probabilities	29
4	Forecasting among alternative strategies under uncertainty	30
4.1	Introduction	30
4.2	Choice of strategy	31
4.3	Effects of lowering forecasting costs	37
4.4	Summary and further reading	38

5	Expectations in time series models	40
5.1	Introduction	40
5.2	Conditional expectations in time and rational expectations	40
5.3	A market model with static, adaptive and rational expectations	45
5.4	Expectations and stock prices	51
5.5	Empirical assessment of expectations hypotheses	56
5.6	Summary and further reading	57
Appendix 5.1	The supply function derived from expected profit maximization	60
Appendix 5.2	Computation of the rational expectations fundamental price	61

PART II EXPERIMENTS AND APPLICATIONS

6	Costly information and decision making	65
6.1	Introduction	65
6.2	The experimental design	66
6.3	Optimal solution strategy	68
6.4	Analysis of individual information acquisition	69
6.5	Analysis of individual performance	77
6.6	Conclusions	79
Appendix 6.1	Instructions for the experiment	82
Appendix 6.2	List of causal rules	87
Appendix 6.3	Proofs of propositions	89
7	Applied welfare economics with boundedly rational expectations	91
7.1	Introduction	91
7.2	Remote sensing	92
7.3	Cost-benefit analysis of the provision of remotely sensed data	94
7.4	How can welfare losses be avoided?	96
7.5	Conclusions	98
8	Pattern recognition as the basis of expectations	100
8.1	Introduction	100
8.2	A model of pattern use	101
8.3	The experiment	102
8.4	Evaluating the responses	104
8.5	Estimates of individual pattern use	105
8.6	Pattern recognition and market psychology	108
8.7	Conclusions	111

Appendix 8.1	Instructions for the experiment	113
Appendix 8.2	The experimental series and measures of $D_i^{3,i}$	116
9	Pattern-based expectations and financial markets	118
9.1	Introduction	118
9.2	The experiment	119
9.3	Experimental results	122
9.4	How well do simple extrapolative schemes explain the elicited expectations?	125
9.5	A simulated asset market and tests of realism	133
9.6	Conclusions	136
Appendix 9.1	Instructions for the experiment	139
Appendix 9.2	Criterion values and rankings for all patterns presented	142
10	Anticipation and coordination failures	145
10.1	Introduction	145
10.2	The game and the two treatments	147
10.3	Optimal strategies	151
10.4	Experimental findings	154
10.5	Conclusions	158
Appendix 10.1	Outline of computer program	160
Appendix 10.2	Proof that outlined strategy is optimal	162
11	Money, transactions and expectations	164
11.1	Introduction	164
11.2	A playable monetary economy	165
11.3	Experimental analysis	167
11.4	Conclusions	174
Appendix 11.1	Instructions for the experiment	177
